Dust-free
 hand sanding

Handy by Mirka: practical hand sanding.

The Handy is very convenient when plaster sanding walls and ceilings.

The Abranet sanding net used with the Handy lasts much longer than traditional sanding paper. P120 or P180 are the recommended grits for plaster sanding on walls and ceilings, depending on the plaster quality.

Sand with net and you will sand dust-free. If you attach the Handy to a extractor you can sand almost dust-free. The dust goes through the sanding net into the dust extractor*. The air is much cleaner and you save time as you do not have to clean up afterwards. The clean net will also give you a better cut for a longer time.

* We recommend that you use an industrial dust extractor.
